

Abstract

A camera system comprising:

- at least one area image sensor for imaging a scene;
- a camera processor means for processing said image scene in accordance with a predetermined scene transformation requirement; and
- a printer for printing out said processed image scene on print media, utilizing printing ink stored in a single detachable module inside said camera system;

said camera system comprising a portable hand held unit for the imaging of scenes by said area image sensor and printing said scenes directly out of said camera system via said printer.
